# KONG® HELPS SOLVE...

## Chewing

**Without an acceptable outlet for the natural instinct to chew, many dogs turn to destructive chewing in the home.** Prevention is key—teaching dogs acceptable chewing behaviors with KONG helps avoid destructive chewing from the start.

## Teething

**Puppies have 28 baby teeth that erupt through the gums, sometimes causing pain.** Chewing soft rubber helps to alleviate teething pain.

## Separation Anxiety

**Separation anxiety occurs in the first 20 minutes after you leave a dog alone.** A simple solution is to help the dog develop a positive association between being left alone and good things, like a treat-stuffed KONG.

## Boredom

**To combat boredom, a dog will always find something to do—often this leads to problem behavior.** A treat-stuffed frozen KONG provides a healthy, mentally stimulating challenge that beats boredom while keeping the dog's mind sharp.

## Digging and Barking

**Digging and barking are typically outgrowths of boredom or fear.** Creating good behaviors start with productive play, which allows dogs to expend excess energy. A frozen treat stuffed KONG offers a mentally occupying challenge that gets rid of excess energy.

## Crate Training

**Crates provide a sense of security for dogs and also aid in housetraining.** A treat-stuffed KONG offered to a dog in the crate provides a delightful experience giving them a positive association with their new space. Repeating the routine makes the dog feel safe and comfortable.

## Weight Management

**Weight management is an important part of dogs' overall health; it's estimated that 35 percent of dogs are overweight or obese.** Feeding your dog from the KONG Classic or Wobbler will not only slow their eating, but provide a satisfying mental and physical challenge.
